Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to a system for measuring circuits on an integrated circuit substrate, classified in class 324, subclass 765.
- II. Claims 20-28, drawn to a method for contactless measurement of a circuit characteristic, classified in class 702, subclass 117.

The inventions are distinct, each from the other because:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process such as a process for measuring package interconnect impedance using probe pins for direct contacting the pads on DUT.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art by their different classification and because the search required for examining Group I is not required for examining Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
